

**To clinics that refer samples to Lund for genetic analysis of hemophilia A and B.**

We have been performing genetic diagnostics of the *F8* and *F9* genes at our research laboratory affiliated with Lund University for many years. The diagnostic part will now be transferred to Clinical Genetics at Skåne University Hospital in Lund. Analyses will be performed at the same laboratory and with the same staff (Biomedical scientist Anna Letelier) as before and the results will continue to be reviewed by the undersigned (Rolf Ljung) during the transition period. The transfer to Clinical Genetics provides better conditions for methodologically developing diagnostics in the future. The transfer entails the introduction of new referrals for the various analyses.

Lund, December 4, 2025
